

Apple TV (Gen 3)

Media streaming device

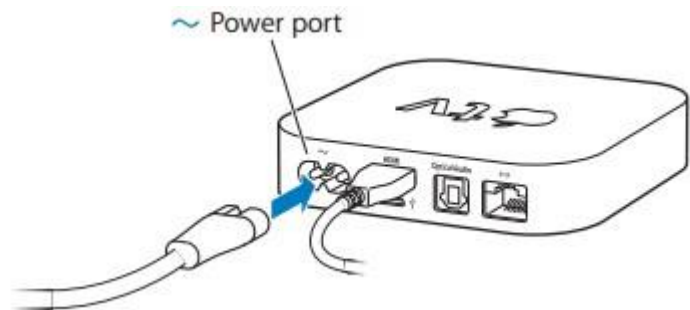

Online directions: <https://goo.gl/3V6cCi>

Quick Start

1. **Plug in:** Connect the device to your TV using an HDMI cable, then connect the power cable to your AppleTV.

2. **Turn on your TV and select input:** find the Apple TV under HDMI in your TVs settings.

3. **Configure your device for wireless internet:** Using the provided remote, select your network from the list, or enter your network name if the network is hidden. Enter your network password (if you use one).
If the remote is unresponsive, check the battery.
4. **Watch:** Browse the interface for watching movies, TV shows, and more. Most channels require a paid subscription account.

The library's does not subscribe to those services, but you are welcome to try them out.

5. **Optionally, mirror your iPad to the AppleTV:**

Find the AirPlay icon on your iPad to send the contents of your iPad screen to the AppleTV. The devices must be on the same network.

This option is usually hidden, if you swipe up from the bottom of your iOS device, you'll see it on the control panel.

When you're finished borrowing the device, the library will reset all of the settings on your Apple TV to factory values.

To reset all settings: choose Settings > General > Reset > Reset All Settings

This will delete all stored account and wireless password data.
